# The Impact of Stigma

# Presentation Roadmap

1. Data Quality
2. Sector-Specific Sources of Error
3. Techniques in Bias Reduction
4. Experimental Approaches
5. Reporting and Funder-Agency Relations

# 1. Why care about quality?

- Bad data misallocates resources and costs credibility
- Homeless serving agencies have sector-specific risks

*“How agencies define and measure problems not only alters the understanding of their prevalence and changes over time but alters where agencies focus limited resources.” (Sullivan 2022, 753).*

# 1. Garbage In, Garbage Out

*“On two occasions I have been asked [by members of Parliament], ‘**Pray, Mr. Babbage, if you put into the machine wrong figures, will the right answers come out?**’ I am not able to rightly apprehend the kind of confusion of ideas that could provoke such a question.”*

Charles Babbage, *Passages from the Life of a Philosopher* (1864), 67.  
[Project Gutenberg](#). [This Photo](#) by Unknown Author is in the [public domain](#).

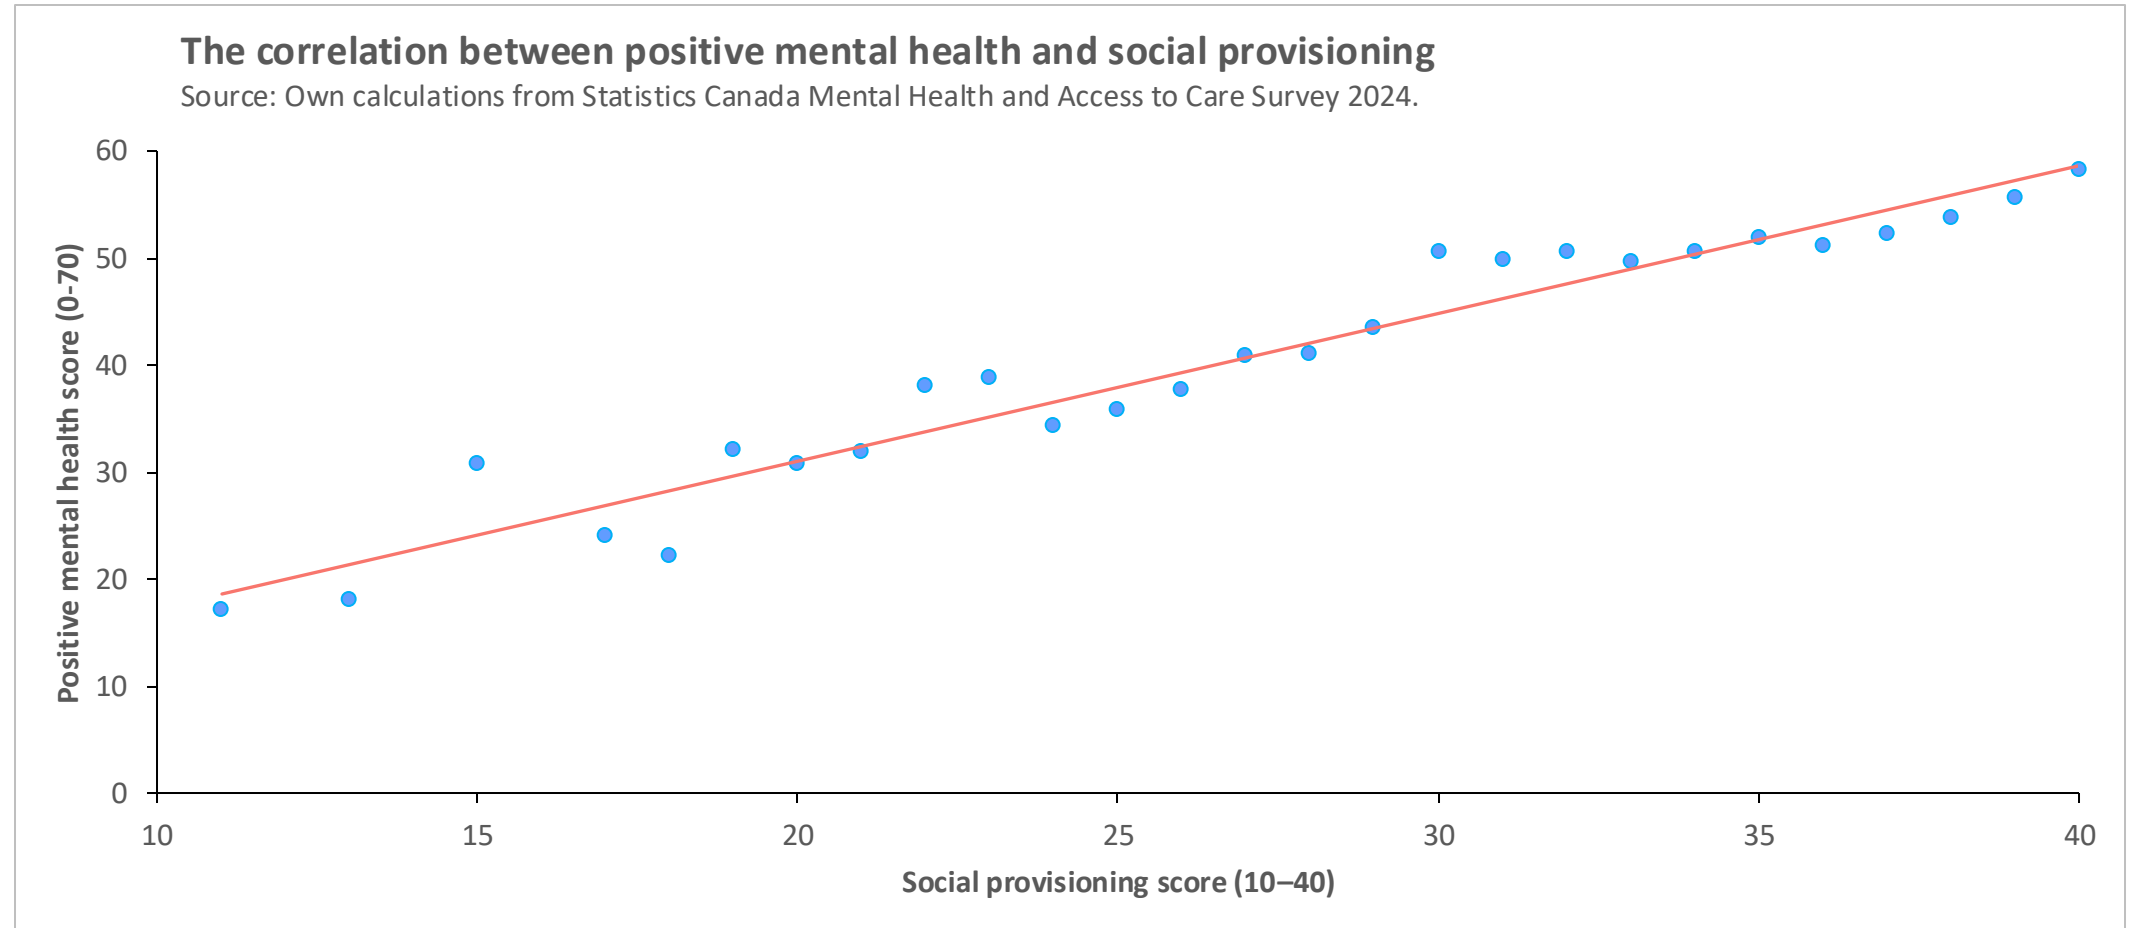

# 1. What is Data Quality? How is it determined?

- An **accurate** representation
- A **consistent** representation
- Data **quality** is not the same as data **integrity**
- Data quality is determined during **collection**.

# 1. Validity: Accurately Reflecting the Real World

-  Measures the right concept (face/content)
-  Reusable across settings (external)
-  Links to related issues (construct)

# 1. Valid Data Behaves Like We Expect

# 1. Validity isn't a binary

# 1. Validity isn't a binary, but a spectrum

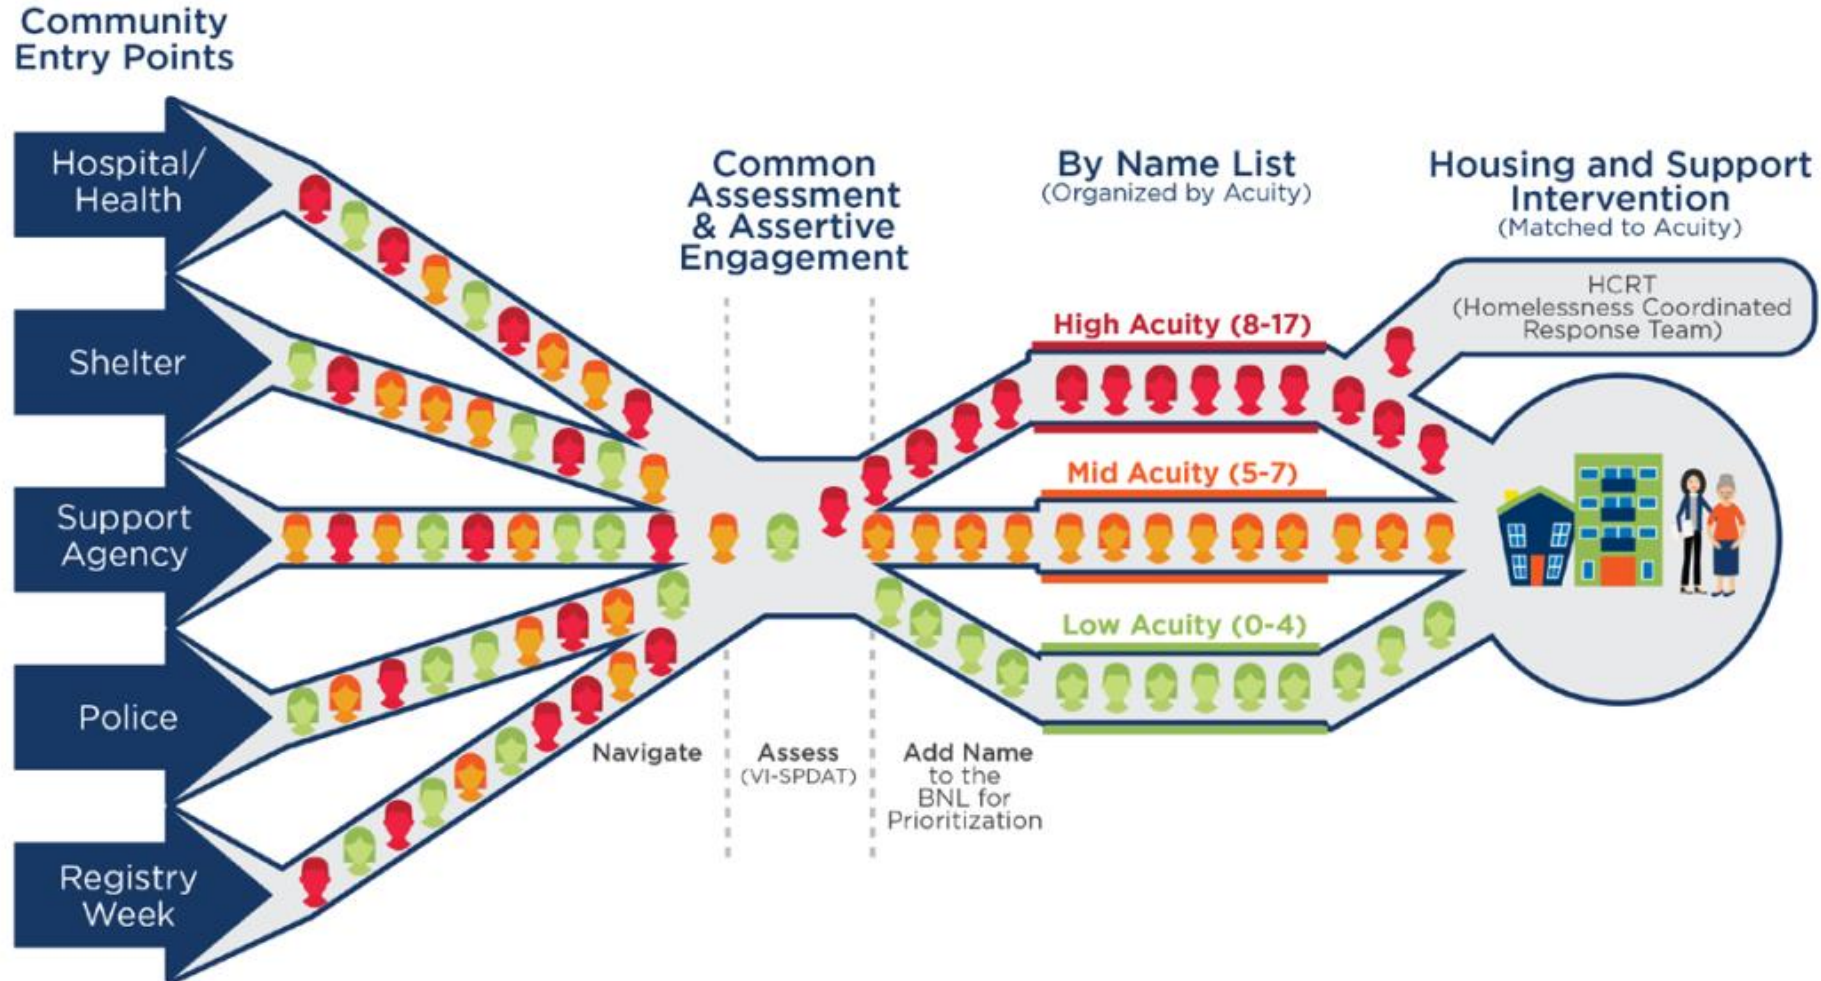

# 1. Perfect validity is a goal, but not an enemy to good

# 1. The Stakes: Data Quality Underpins Decisions

## Coordinated Entry System

# 1. The Stakes: Data Quality Has Consequences

Fairbanks School of Public Health, Indiana University-Purdue University Indianapolis, Indianapolis, IN, USA

### ABSTRACT

This study examined the reliability and validity of the Vulnerability Index-Service Prioritization Decision Assistance Tool (VI-SPDAT), a widely-used assessment of the health and social vulnerabilities and housing needs of individuals experiencing homelessness. Homeless Management Information System data were obtained for 1495 individuals who were administered the VI-SPDAT between 2014 and 2016. Subsamples were selected for reliability and validity assessments. Results suggest there are challenges to the reliability and validity of the VI-SPDAT in practical use. VI-SPDAT total scores did not significantly predict risk of return to homeless services, while type of housing was a significant predictor. Vulnerability assessment instruments have important implications for communities working to end homelessness by facilitating prioritization of scarce housing resources. Findings suggest that further testing and development of the VI-SPDAT is necessary.

### ARTICLE HISTORY

Accepted 28 May 2018

### KEYWORDS

Vulnerability assessment;  
homelessness; housing  
prioritization; measurement

# 1. The Stakes: Data Quality Has Consequences

A total of 158 individuals had more than one administration of the VI-SPDAT. Test-retest reliability coefficients fell below the  $r \geq .7$  cutoff for acceptable test-retest reliability across the three timeframes (Table 3). Retest trends showed that total VI-SPDAT scores were higher on second administration for 110 (69.6%) participants and were lower on second administration for 30 (19.0%) participants. Kappa coefficients for the four items across timeframes were in the slight to fair range for inter-rater reliability (i.e.  $\leq .4$ ; Landis & Koch, 1977).

# 1. Reliability: The Same Data—Anytime, Anyone

Low random error

Consistent over time

Consistent across recorders

## 2. Sector-Specific Sources of Reliability Error

Reliability Problem	Examples
Consistent definitions	Provisional housing; refugees
Concept stretching	ETHOS “housing excluded”
Inter-rater	Volunteer or staff skills
Test -retest	PiT dates and conditions

**Table:** Threats to Reliability

## 2. Random Error: The Cheeky Imp of Data Quality

- Illness
- Windows updates
- Reduced attention on day 2 of a conference
- Noise is about numbers
- **Systematic error or bias**

## 2. Systemic Bias is Downstream of Other Issues

- It **is not** personal or institutional bias
- It **is not** random
- It **is** a consistent inaccuracy
- Sometimes it's the analysis of collected data
- It's usually a **collection issue**

## 2. Examples of Bias

↑ Underreporting

↓ Overreporting

## 2. Examples of Bias

Source: CBC News

## 2. Social desirability bias and disclosure

- Preference or behaviour falsification
- Over-report the 'good', under-report the 'bad'

## 2. Polling on the Russian Invasion

Source: Atlantic Council

## 2. Voter Turnout

Source: Edmonton Journal

## 2. Social desirability bias and disclosure

Source: Financial Times

## 2. Social Desirability and Homelessness

- Mental health
- Personal income
- Compliance with treatment
- Criminal behaviour
- Substance use
- Living situation

## 2. The Consequences of SDB

- Individual
- Program effectiveness
- Policy development

# 3. General Techniques for SDB

- Ensure anonymity where possible
- Self-administration
- But these are **not perfect**
- Sometimes **linkage is desirable.**

# 3. Specialized Techniques

- Ballot Box Method
- Asking about friends
- List experiment
- Games

# 3. Ballot Box Method

- Separate intake from questions
- Questions should be anonymous
- Unique IDs, Shared Key
- Allows for linkage

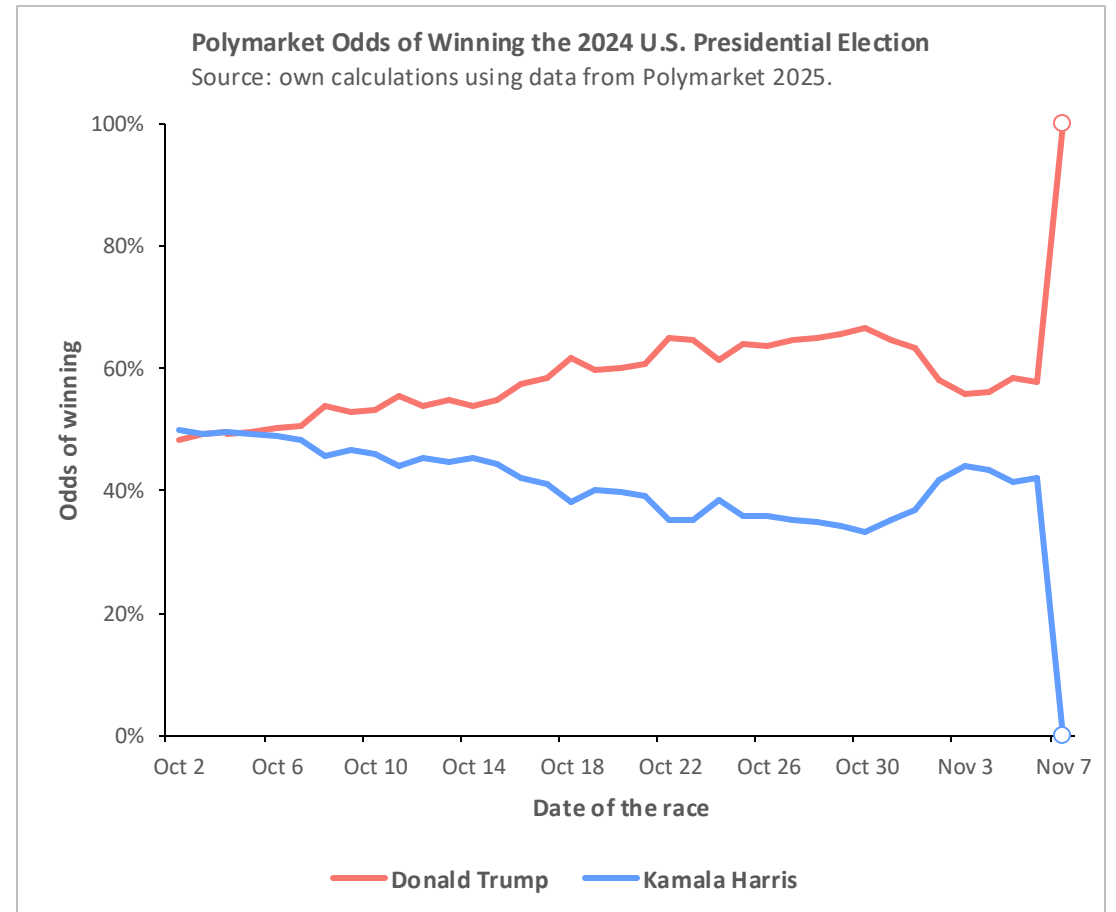

[This Photo](#) by Unknown Author is licensed under [CC BY](#)

### 3. BBM Use, Benefits, and Trade-offs

- Has been used widely
- Relatively simple
- High degree of validity
- Requires some limited analytical support
- Ethical implications

# 3. The Friend Poll

- U.S. 2024 Election
- Polymarket
- How much would you have bet?
- The \$100,000,000 gamble

### 3. Getting By With a Poll of Your Friends

# How a French Whale Made \$85 Million off Trump's Win

(IMAGES VIA GETTY; ILLUSTRATION BY THE FREE PRESS)

A trader on Polymarket outsmarted the entire polling industry. He talks to Joe Nocera.

Nocera 2024

### 3. Getting...

*“How many people do you know?”*

*“Do any of these people use [drug]?”*

*“Do they usually use alone, or with others? How many”*

# 3. Other Alternatives

- No tool is perfect
- Ballot Box Issues
- The Friend Poll
- **Randomization**

# 4: List Experiments: Hiding in the Crowd

Source: "Where's Waldo?"

## 4: Hiding in the Crowd

- Identifies the prevalence of an issue
- Not individual application or belief
- Sensitive items hide among other items

# 4: Hiding in Plain Sight

- List of items
- Non-sensitive
- Not universal
- Asked **how many**
- **But not which**

# 4: The Direct Question

**Do you believe encampments should be cleared if sufficient shelter space is available?**

- ☐ Yes
- ☐ Maybe
- ☐ No
- ☐ Don't know / unsure

## 4: Our Crowd: The Control List

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- Current services in our community are effectively reducing homelessness.

***How many** of these statements do you agree with? You do not need to specify which ones—**just the number.***

# 4. Comparing Lists

## Control list

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- Current services in our community are effectively reducing homelessness.

***How many** of these statements do you agree with? You do not need to specify which ones—**just the number.***

# 4. Comparing Lists: Similar Items, Similar Average

## Control list

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- Current services in our community are effectively reducing homelessness.

***How many** of these statements do you agree with? You do not need to specify which ones—**just the number.***

## Control list

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- Current services in our community are effectively reducing homelessness.

# 4. Introducing the Extra Item

## Control list

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- Current services in our community are effectively reducing homelessness.

***How many** of these statements do you agree with? You do not need to specify which ones—**just the number.***

## Sensitive list

*Below is a list of statements regarding the homeless-serving sector:*

- Funding should focus on long-term housing over shelters
- Private sector housing plays a key role in addressing homelessness
- Building shelter capacity should be prioritized over long-term housing
- **Encampments should be cleared if shelter spaces are available.**
- Current services in our community are effectively reducing homelessness.

***How many** of these statements do you agree with? You do not need to specify which ones—**just the number.***

## 4. Leveraging excludability

- Given both groups are similar...
- And they share non-sensitive items
- What explains a difference in # items chosen?

## 4. Identifying the Difference

Group	# Statements	Average
Control List (N=56)	125	2.23
Sensitive List (N=54)	151	2.80
<b>Average Difference</b>	—	<b>0.57</b>

Table: List Difference in Means

## 4. Identifying the Difference

Group	# Statements	Average
Control List (N=56)	125	2.23
Sensitive List (N=54)	151	2.80
<b>Average Difference</b>	—	<b>0.57</b>

Table: List Difference in Means

## 4. Identifying Prevalence

Group	# Statements	Average
Control List (N=56)	125	2.23
Sensitive List (N=54)	151	2.80
<b>% Sensitive Item</b>	—	<b>0.57</b>

Table: List Difference in Means

## 4. Recovering the Extra Item

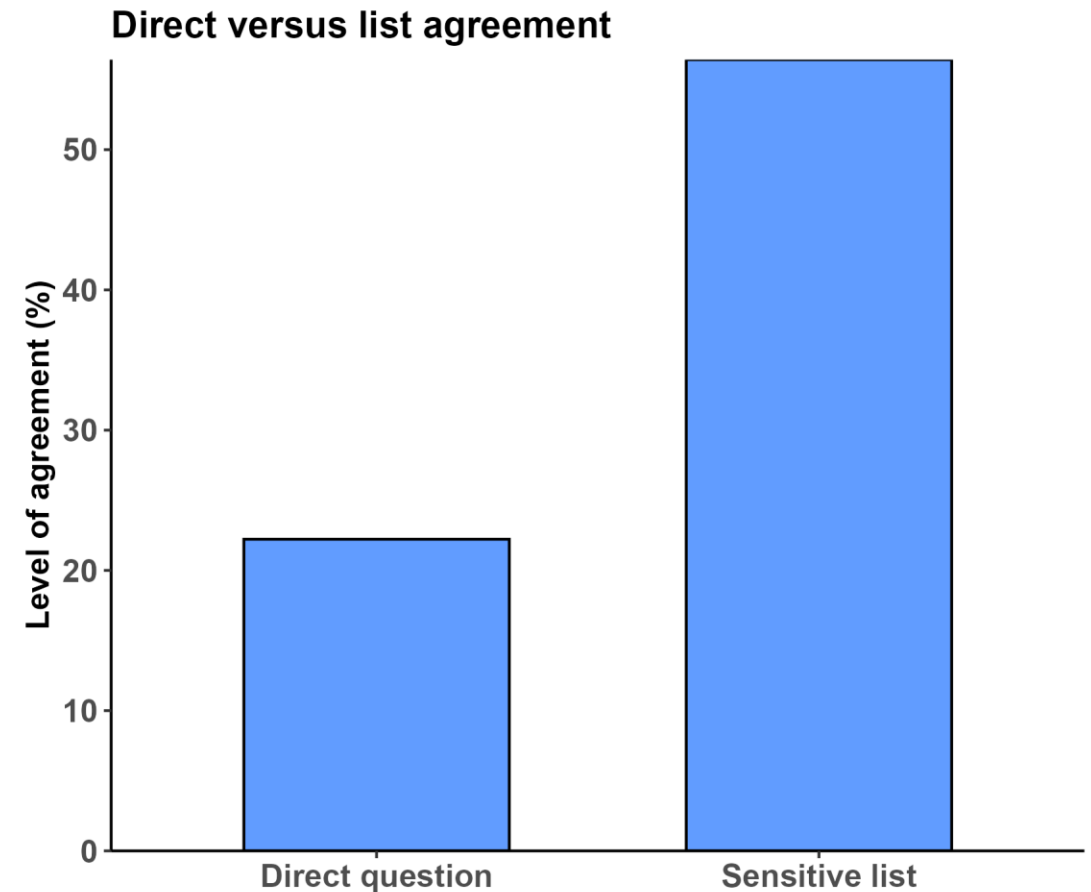

Respondents (N=10)	Number of Sensitive Items Chosen
Client 1	1
Client 2	0
Client 3	0
Client 4	1
Client 5	0
Client 6	1
Client 7	0
Client 8	0
Client 9	0
Client 10	1
<b>Total # Sensitive Items Chosen</b>	<b>4</b>
<b>Average # Sensitive Items Chosen</b>	<b>0.4</b>

### Table: Sensitive Item Prevalence

## 4. Comparing approaches

- **57% agreed** using the list approach
- **22% agreed** using the direct question
- Hiding the item **reduces SDB**

## 4. List Benefits

- Wide application
- High degree of validity
- Not time intensive
- Easy top-level analysis

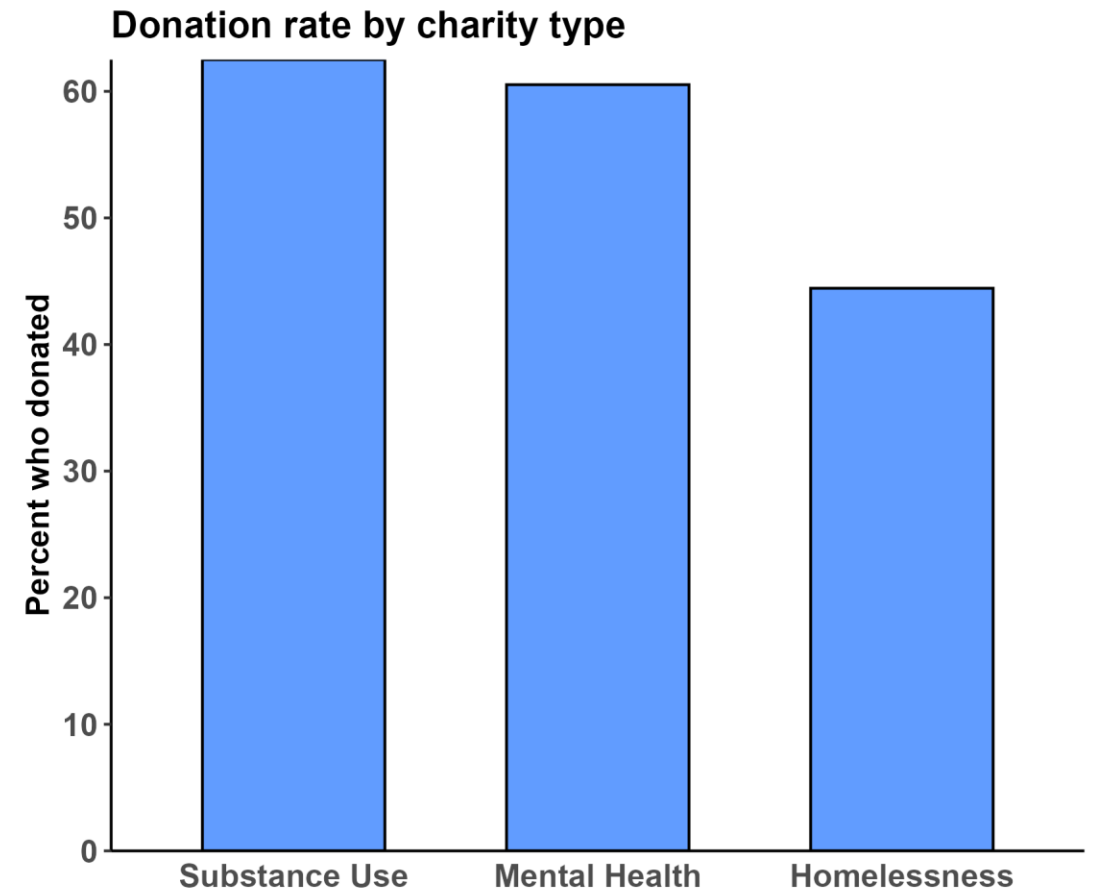

## 4. Dictator Game: Applied Agency

- Giving people resources
- Seeing how they allocate them
- **Revealing preferences**

## 4. Testing Causes

- Keep or donate
- 56% donated
- Variation by cause

## 4. Applied Games

- Fundraising drives
- Impact of volunteers
- Preference for housing stability

## 4. Some Caveats

- The example here is illustrative,
- **Not** prescriptive
- Sample size issues
- **Don't disappoint Charles**

[This Photo](#) by Unknown Author is licensed under [CC BY-SA-NC](#)

## 4. Other Caveats

- Hawthorne Effect
- Staff training
- Client comprehension
- Remember, **validity is a range**

# Conclusion: Reporting and Funder-Agency Relations

- The goal is to increase quality
- Eliminating all issues is impossible
- Sound tools are not always complex
- Apply widely within your sector
- Test against other measures

# Conclusion: Funder-Agency Relations

- Good data analysis begins at the collection phase, before any statistical work begins
- Certain sectors, especially homelessness, are subject to statistical biases arising from stigmas, fear, shame, or anti-social behaviour
- Addressing statistical bias supports the effective targeting of limited funds, staff, and time; more importantly, it can improve client outcomes
- New tools, many of them simple, have been developed to uncover data around sensitive issues, many of which are at the core of serving clients experiencing homelessness
- When implemented at the funder-agency level, they support a healthier relationship, based on mutual understanding of precise data and mission.

# Supplemental: Common List Issues

Issue	Definition	Solution
The Hawthorne Effect	People act differently when they know they're in an experiment	Don't let them know! Requires justifying to ethics
Instruction Fails/Presence	Enumerators watch or inadequately explain the question	Better training around privacy and verbatim instructions
Comprehension Fails	Respondents report "which" instead of "how many", or count too quickly	Separate the explanation/question from the answer sheet
Ceiling/Floor Effects	Universal (dis)agreement on non-sensitive items impacts anonymity	Include items that elicit disagreement or are opposed to another item
Miscounting	Honest mistakes due to long or cognitively demanding lists	Keep it short and simple (3 –5 items, max)

Table: List Experiment Issues

# Supplemental: Common List Issues

Issue	Definition	Solution
Lying	Cognizant misreporting their count	Validate against other tests; double-list designs
Related Controls/Sensitivity	Including a control item that's related to the sensitive item	Make sure control items are not directly related to sensitive items
List-length Imbalance	Suspicious of the +1 item	Add a placebo item or list
Item-order Effects	The first/last items dominate memory; the position of the sensitive item influences count	Shuffle the order of items electronically or randomly on paper
Heterogeneity	Different groups might agree to different counts of items	Stratification: randomize the list within subgroups (e.g., gender, Indigeneity)

### Table: List Experiment Issues

# Supplemental: Humour
